The book consists of a series of short cases that help you apply what you've learned by placing you in real life situations that allied health professionals face every day. The six chapters in the book provide examples of infectious diseases presented to you in the way you will encounter them in your life or clinical practice. The cases are grouped by chapter according to the body site that is most affected. This mirrors what happens in clinical practice: your first encounter with a patient's infection will be what you can see and what the patient can tell you.
